

클라우드 Open AI API를 활용한 슬기로운 Toy Playground 개발하기

장창환 **NAVER Cloud**

CONTENTS

1. NAVER Cloud Platform Service Overview
2. NAVER Cloud Platform SaaS Platform Overview
3. Toy Playground #1

TextRank Python 라이브러리를 활용한 My Summary Bot 서비스 구현하기

4. Toy Playground #2

CFR(Clova Face Recognition) API를 활용한 My Gallery 서비스 구현하기

5. Toy Playground #3

Universal Knowledge Playground 서비스 구현하기

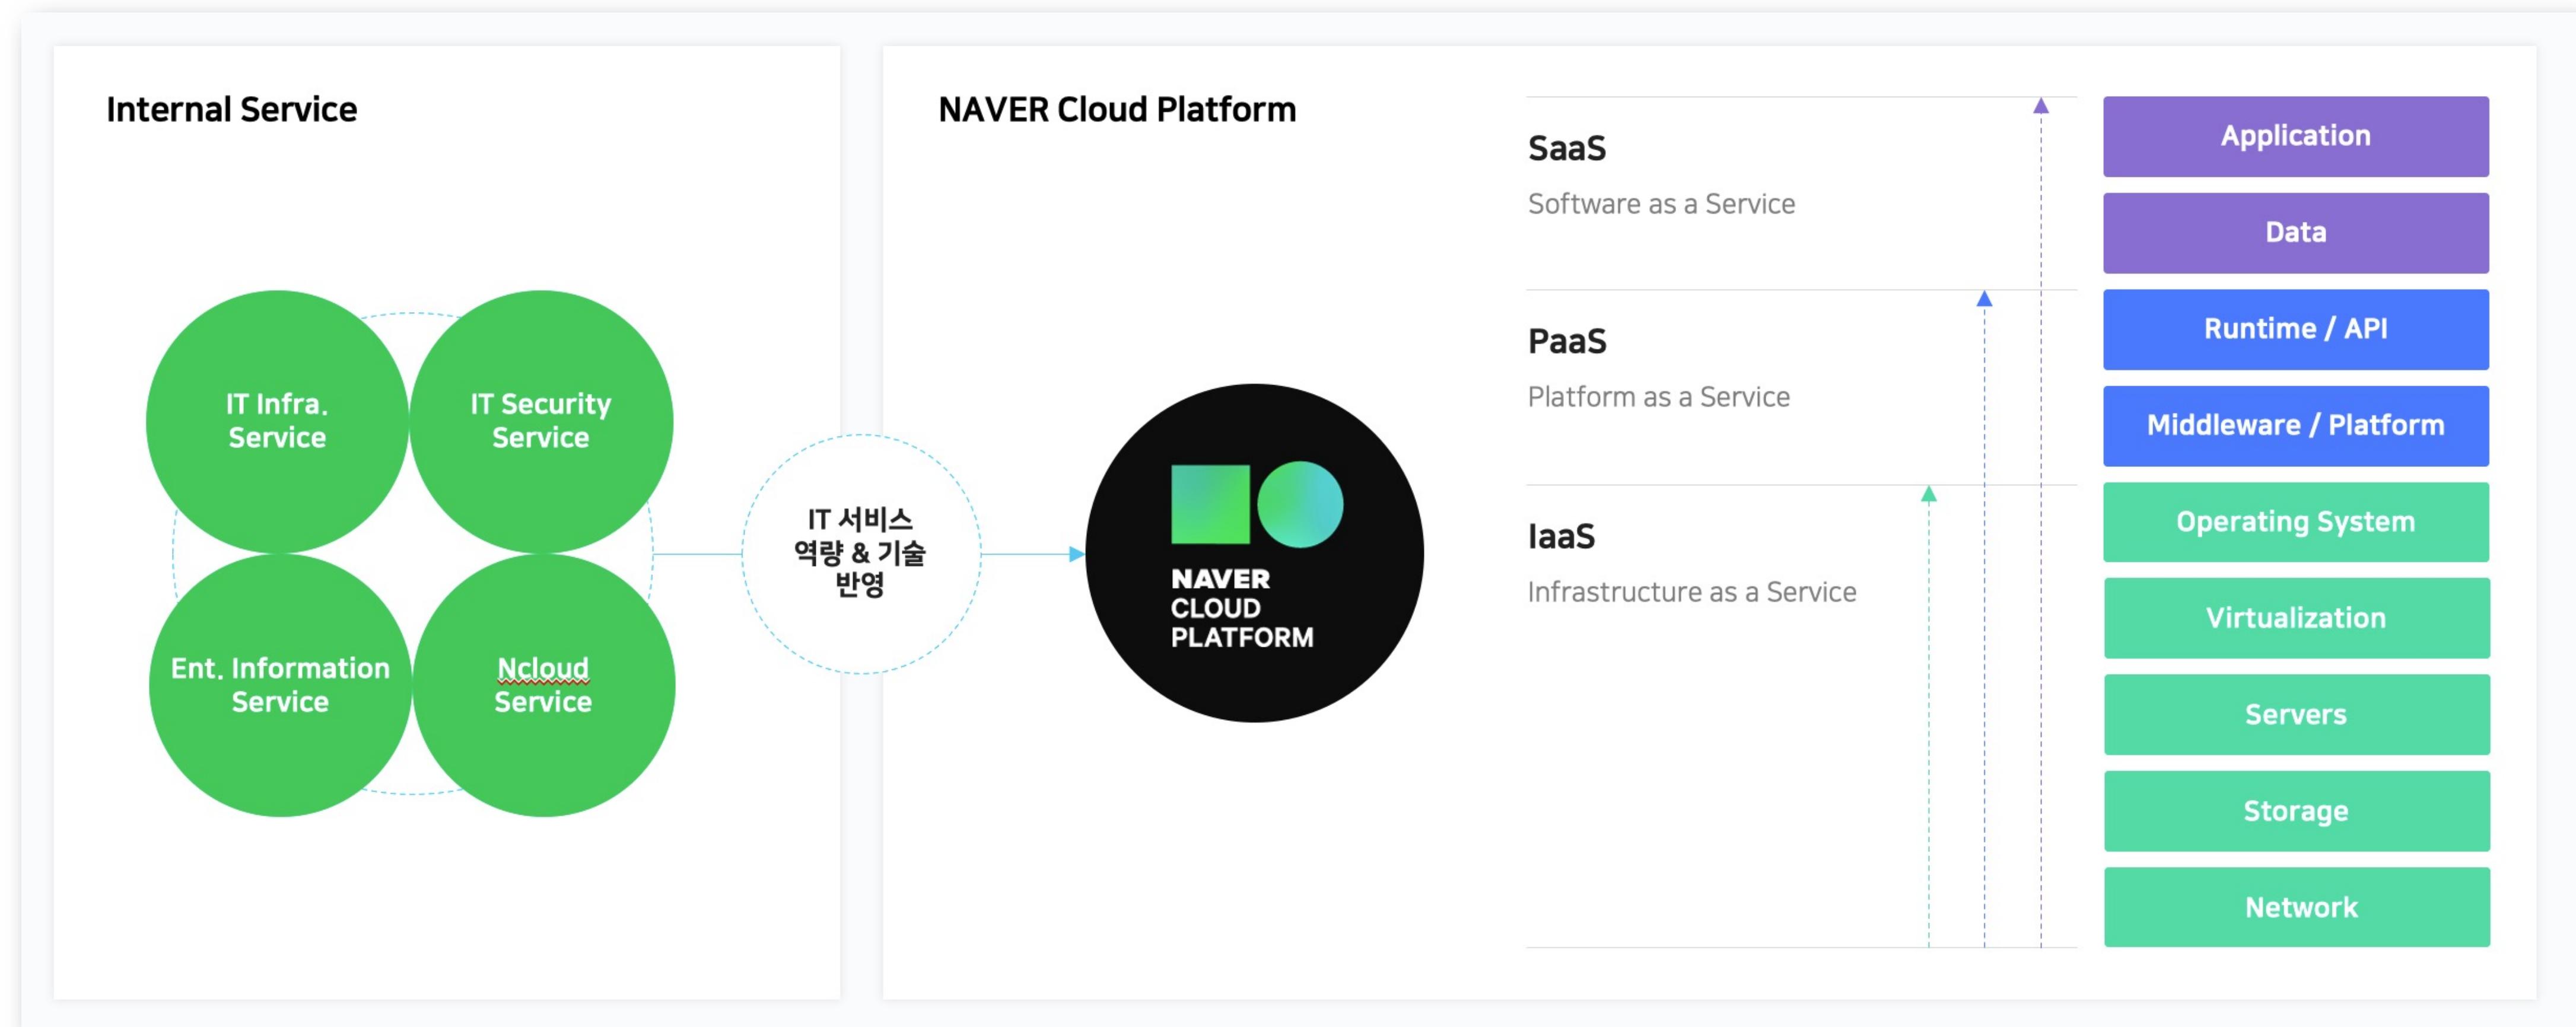

6. Toy Playground #4

CFR(Clova Face Recognition) API를 활용한 Face Image Analyzer Service 구현하기

1. NAVER Cloud Platform Service Overview

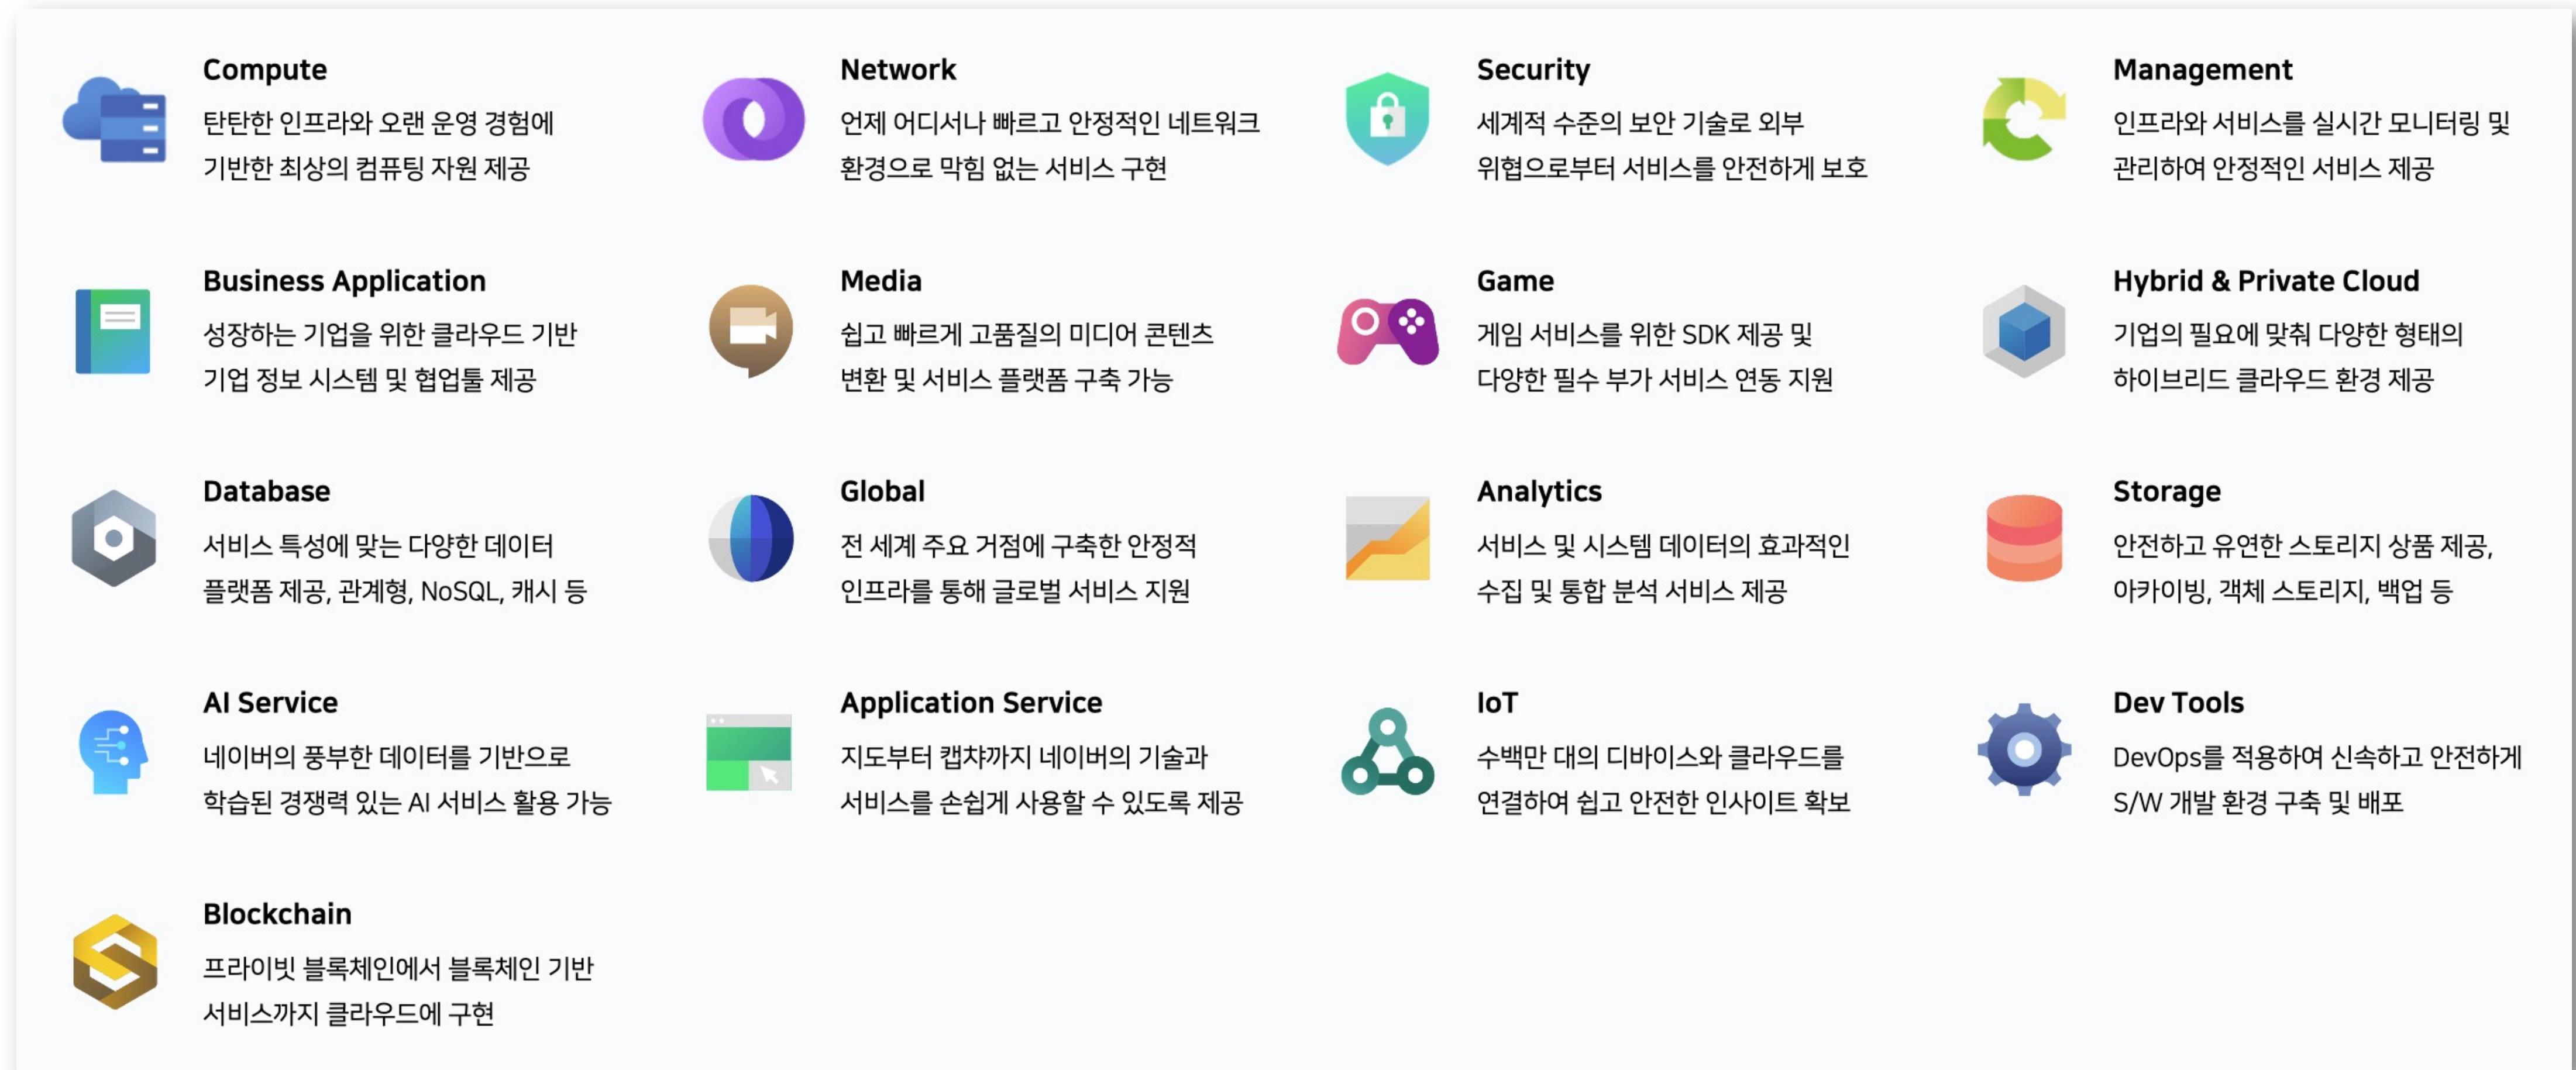

Cloud Platform & Service

2017년 본격적으로 시작하여 매년 빠르게 성장하고 있는 퍼블릭 클라우드 서비스, 1999년부터 네이버와 계열사들의 서비스를 안정적으로 구축 및 운영해온 Internal Service 두 개의 사업 영역으로 나누어져 있습니다.

Service Map

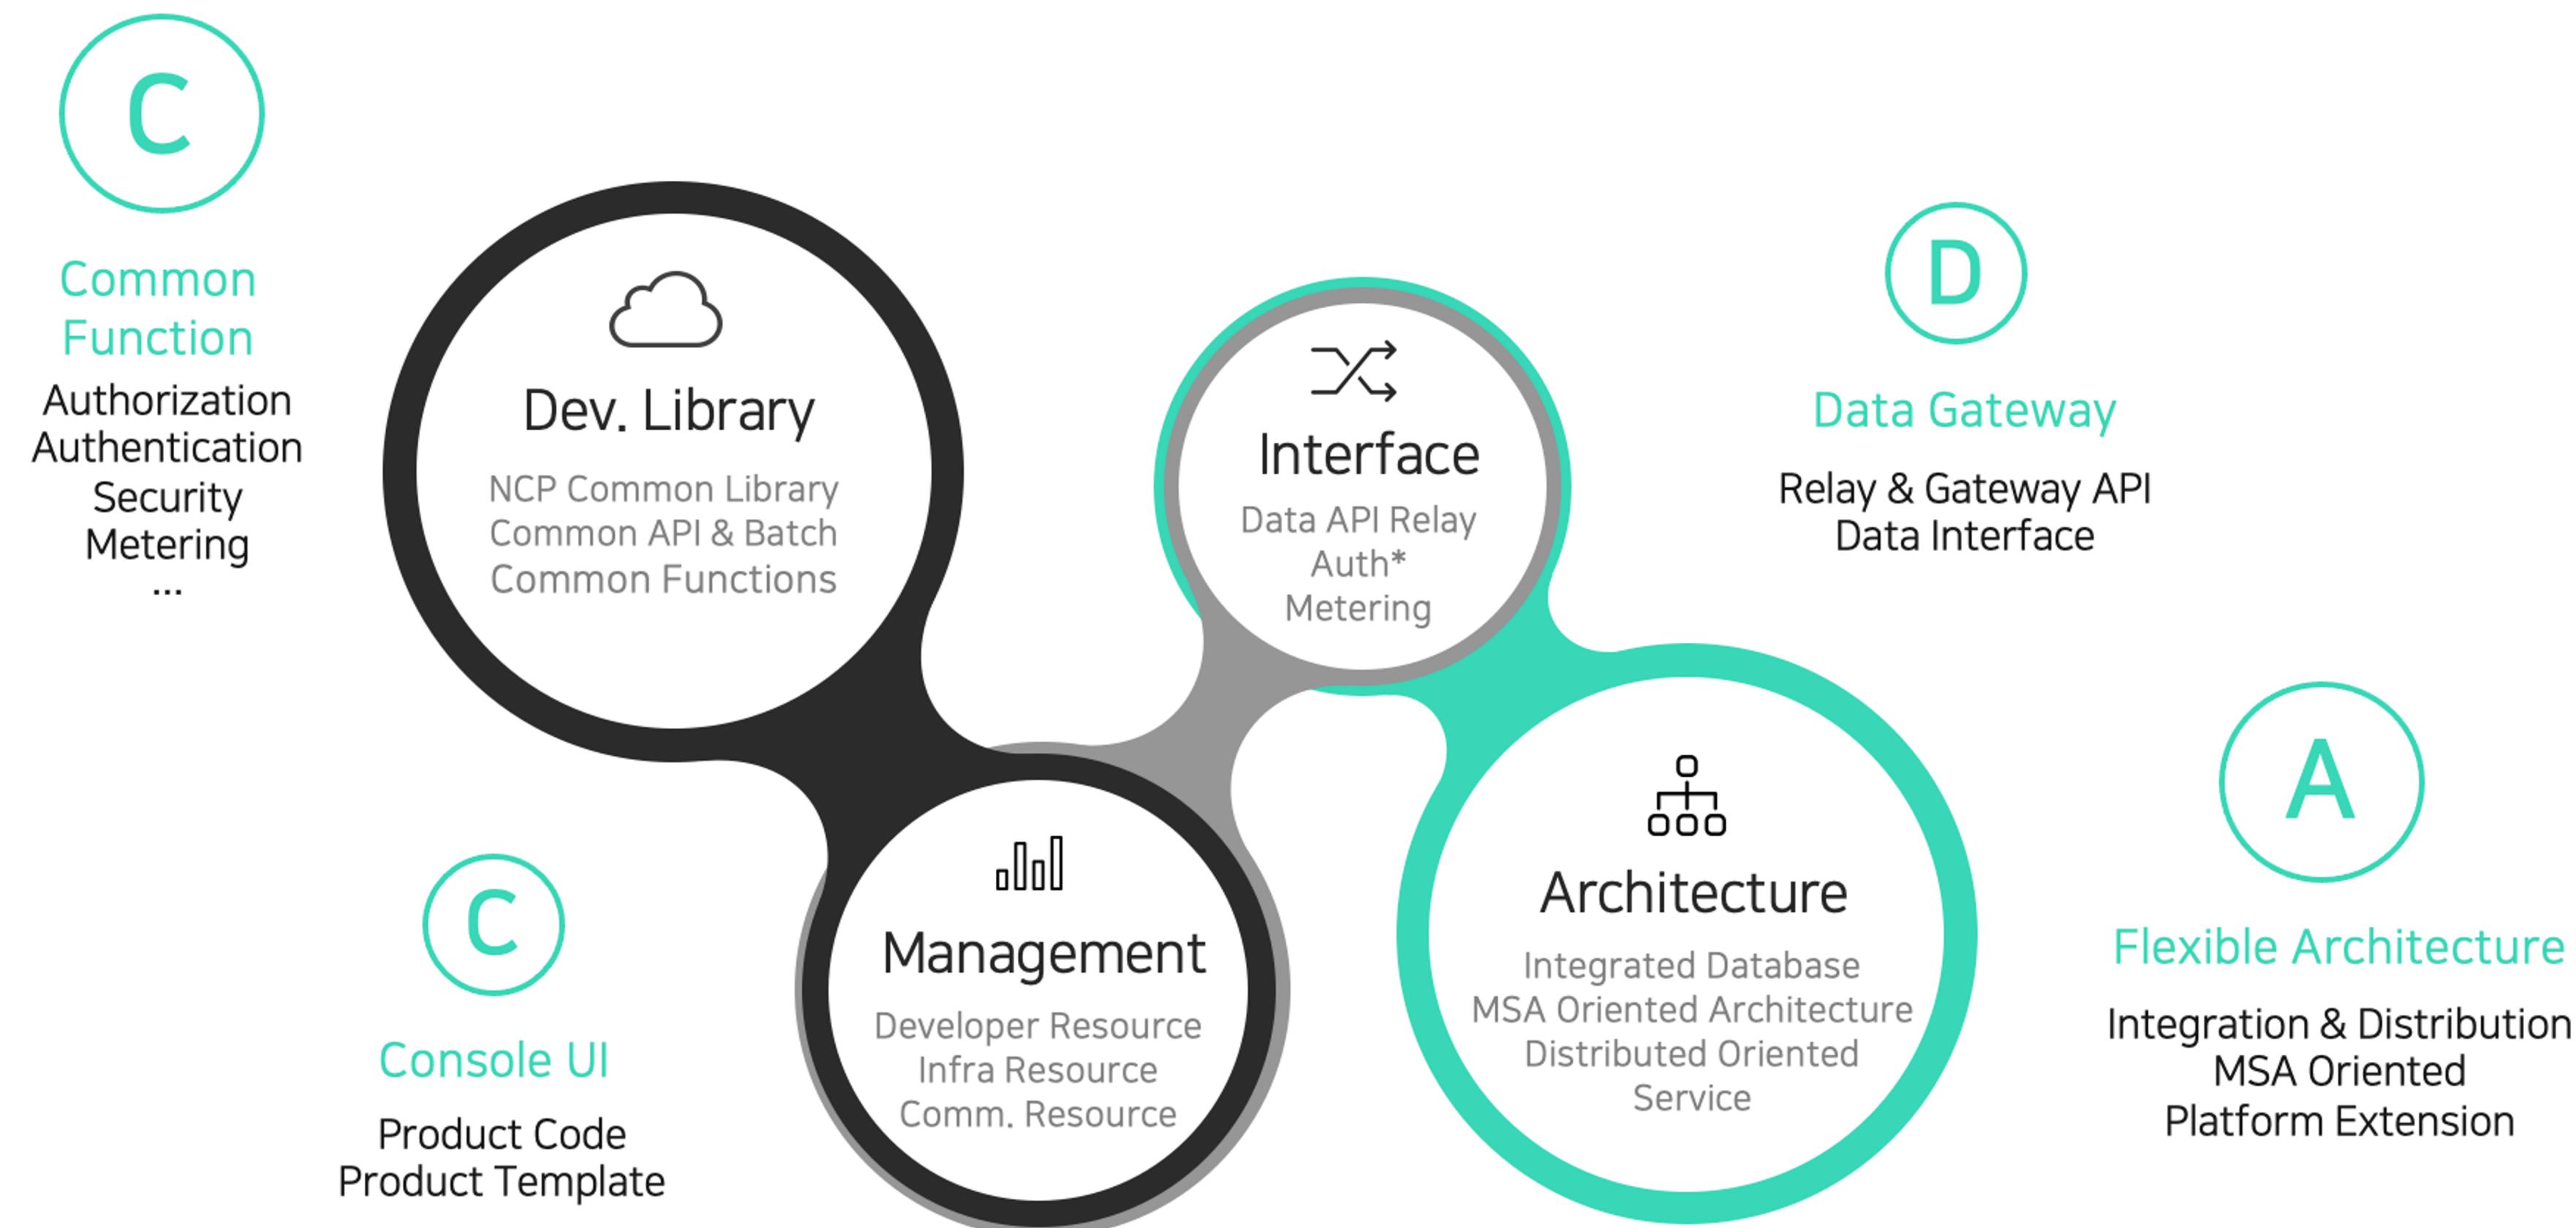

안정적인 필수 인프라, 기업 특성에 맞춘 하이브리드 클라우드와 네이버의 데이터를 학습한 AI 및 기업정보시스템과 협업 툴 서비스를 제공하고 있습니다.

2. NAVER Cloud Platform SaaS Platform Overview

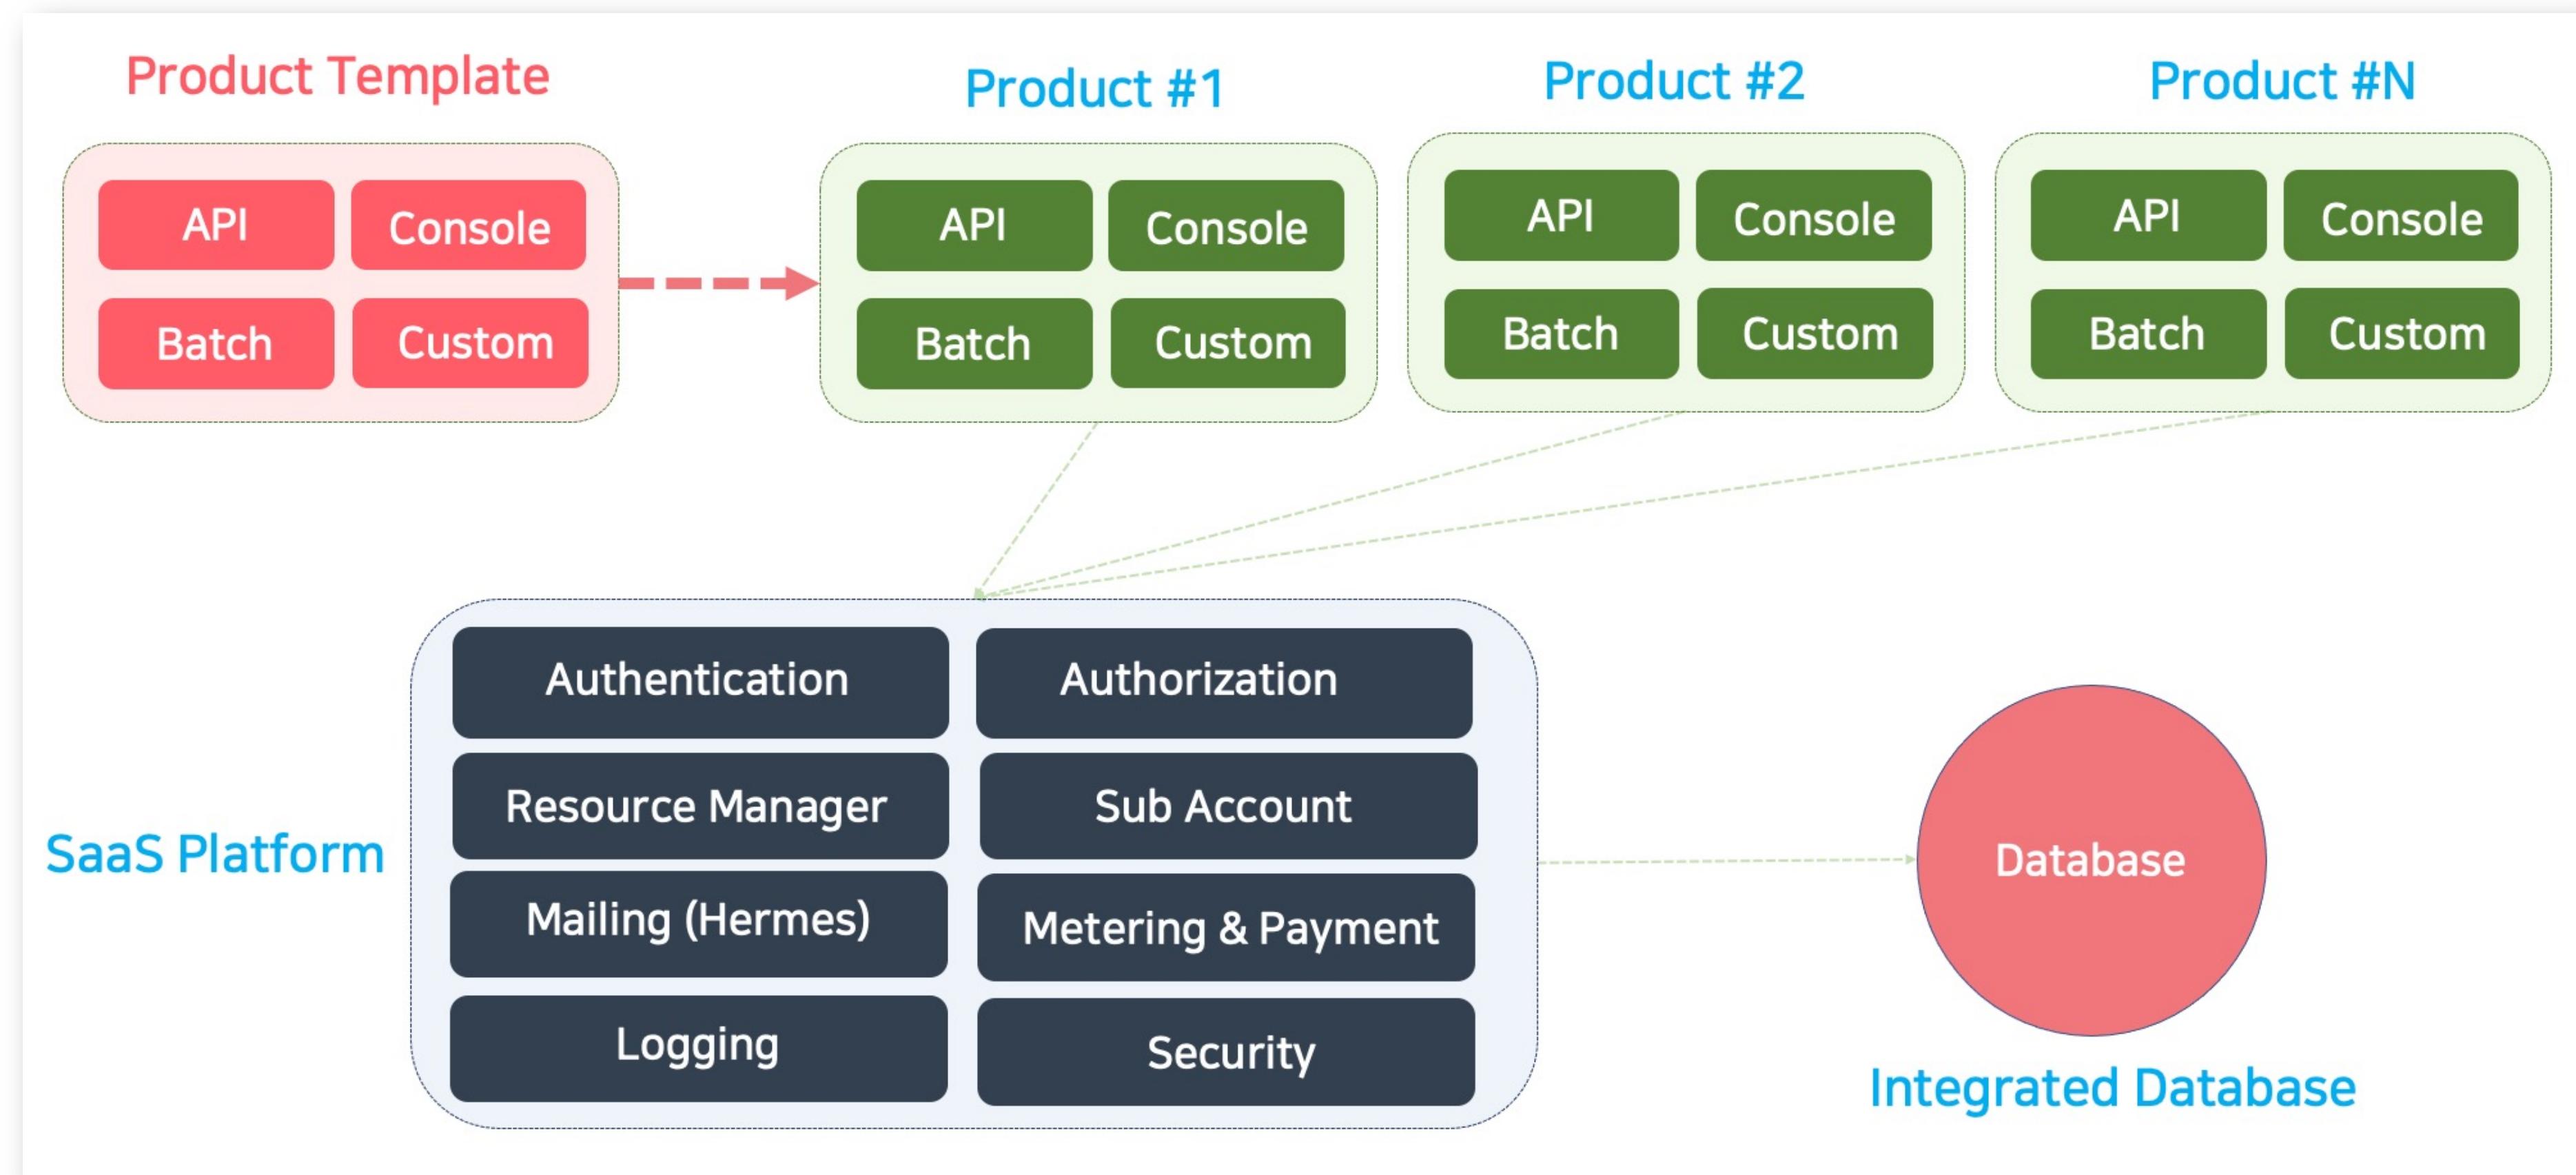

Key Feature of SaaS Development Platform

- Effective Resource Management of SaaS Products – Developer, Infra, Communication
- Advocation of MSA(Micro Service Architecture) & Minimized Dependency Points
- Support & Release Latest Common Cloud Library & SDKs, API

SaaS Platform Service Architecture

Common Function과 Custom Function 분리 아키텍처 적용, 상품 별 Customizing 기능은 별도 상품 서버 사용 가능
Monolithic Architecture를 지양하고, 최대한 MSA(Micro Service Architecture) 마이그레이션 가능하도록 설계

3. Toy Playground #1

TextRank Python 라이브러리를 활용한
My Summary Bot 서비스 구현하기

TextRank: Bringing Order into Texts

Description
In this paper, the authors introduce TextRank, a graph-based ranking model for text processing, and show how this model can be successfully used in natural language applications.

- Mostly designed for Korean, but not limited to.
- Click [here](#) to see how to install KoNLPY properly.
- Check out [textrankr](#), which is a simpler summarizer using TextRank.

Physical Description
8 p.

Creation Information
Mihalcea, Rada, 1974- & Tarau, Paul July 2004.

Context
This paper is part of the collection entitled: UNT Scholarly Works and was provided by the UNT College of Engineering to the UNT Digital Library, a digital repository hosted by the UNT Libraries. It has been viewed 11460 times, with 53 in the last month. More information about this paper can be viewed below.

KoNLPy

build passing docs passing

KoNLPy (pronounced "ko en el PIE") is a Python package for natural language processing (NLP) of the Korean language. For installation directions, see [here](#).

For users new to NLP, go to [Getting started](#). For step-by-step instructions, follow the [User guide](#). For specific descriptions of each module, go see the [API documents](#).

KoNLPy

KoNLPy is a Python package for Korean natural language processing.

Textrankr, lexrankr with Python

- Graph-Based Ranking Model인 TextRank 활용, 자연어 응용 분야 활용
- Tokenizer 비 포함, KoNLPY를 활용하여 구현 가능
- Python Library & Node.js/Java 조합하여 독립 모듈 활용 가능

API 공동 가이드 개요

API 공동 가이드는 네이버 오픈API를 사용해 클라이언트 애플리케이션을 개발할 때 미리 알아 두어야 하는 내용을 설명합니다.

최종 수정일: 2017년 8월 16일

이 문서의 내용은 언제든지 변경될 수 있습니다.

API 공동 가이드 구성

API 공동 가이드의 내용은 다음과 같습니다.

- 네이버 오픈API 종류
 - 로그인 방식 오픈 API
 - 비로그인 방식 오픈 API
- 사전 준비 사항

검색 > 백과 사전

네이버 백과사전 검색 결과를 출력해주는 REST API입니다. 비로그인 모든 API이므로 GET으로 호출할 때 HTTP Header에 애플리케이션 등록 시 발급받은 Client ID와 Client Secret 값을 같이 전송해 주시면 활용 가능합니다. 백과사전 검색 대상은 다음과 같습니다.
: 두산백과 doopedia, 네이버 백과사전, 네이버 테마백과, 네이버캐스트, 위키백과, 향토문화대전, 한국역대인물종합정보, 자연도감식물정보, 자연도감동물정보, 음식재료정보, 용어사전

오픈 API 이용 신청

1. 준비사항

- 애플리케이션 등록: 네이버 오픈 API로 개발하시려면 먼저 'Application-애플리케이션 등록' 메뉴에서 애플리케이션을 등록하셔야 합니다.
[자세한 방법 보기]
- 클라이언트 ID와 secret 확인: '내 애플리케이션'에서 등록한 애플리케이션을 선택하면 Client ID와 Client Secret 값을 확인할 수 있습니다.
- API 권한 설정: '내 애플리케이션'의 'API 권한관리' 탭에서 사용하려는 API가 체크되어 있는지 확인합니다. 체크되어 있지 않을 경우 403 에러(API 권한 없음)가 발생하니 주의하시기 바랍니다.

2. API 기본 정보

메서드	인증	요청 URL	출력 포맷
GET	-	https://openapi.naver.com/v1/search/encyc.xml	XML
GET	-	https://openapi.naver.com/v1/search/encyc.json	JSON

3. 요청 변수

요청 변수명	타입	필수 여부	기본값	설명

NMT Service API

NAVER Cloud Platform PapagoNMT

- 가장 뛰어난 한국어 번역 품질을 제공하는 인공 신경망기반 기계 번역 API
- 풍부한 한국어 언어 처리 경험과 학습을 통해 높아지는 성능 기반 서비스 가능
- 안전한 개인정보 관리와 자동 언어감지 기능, 높임말 번역 기능 제공

PapagoNMT API Specification

Client ID / Secret Key / Context-Type / Text(Search)

PapagoNMT API Request

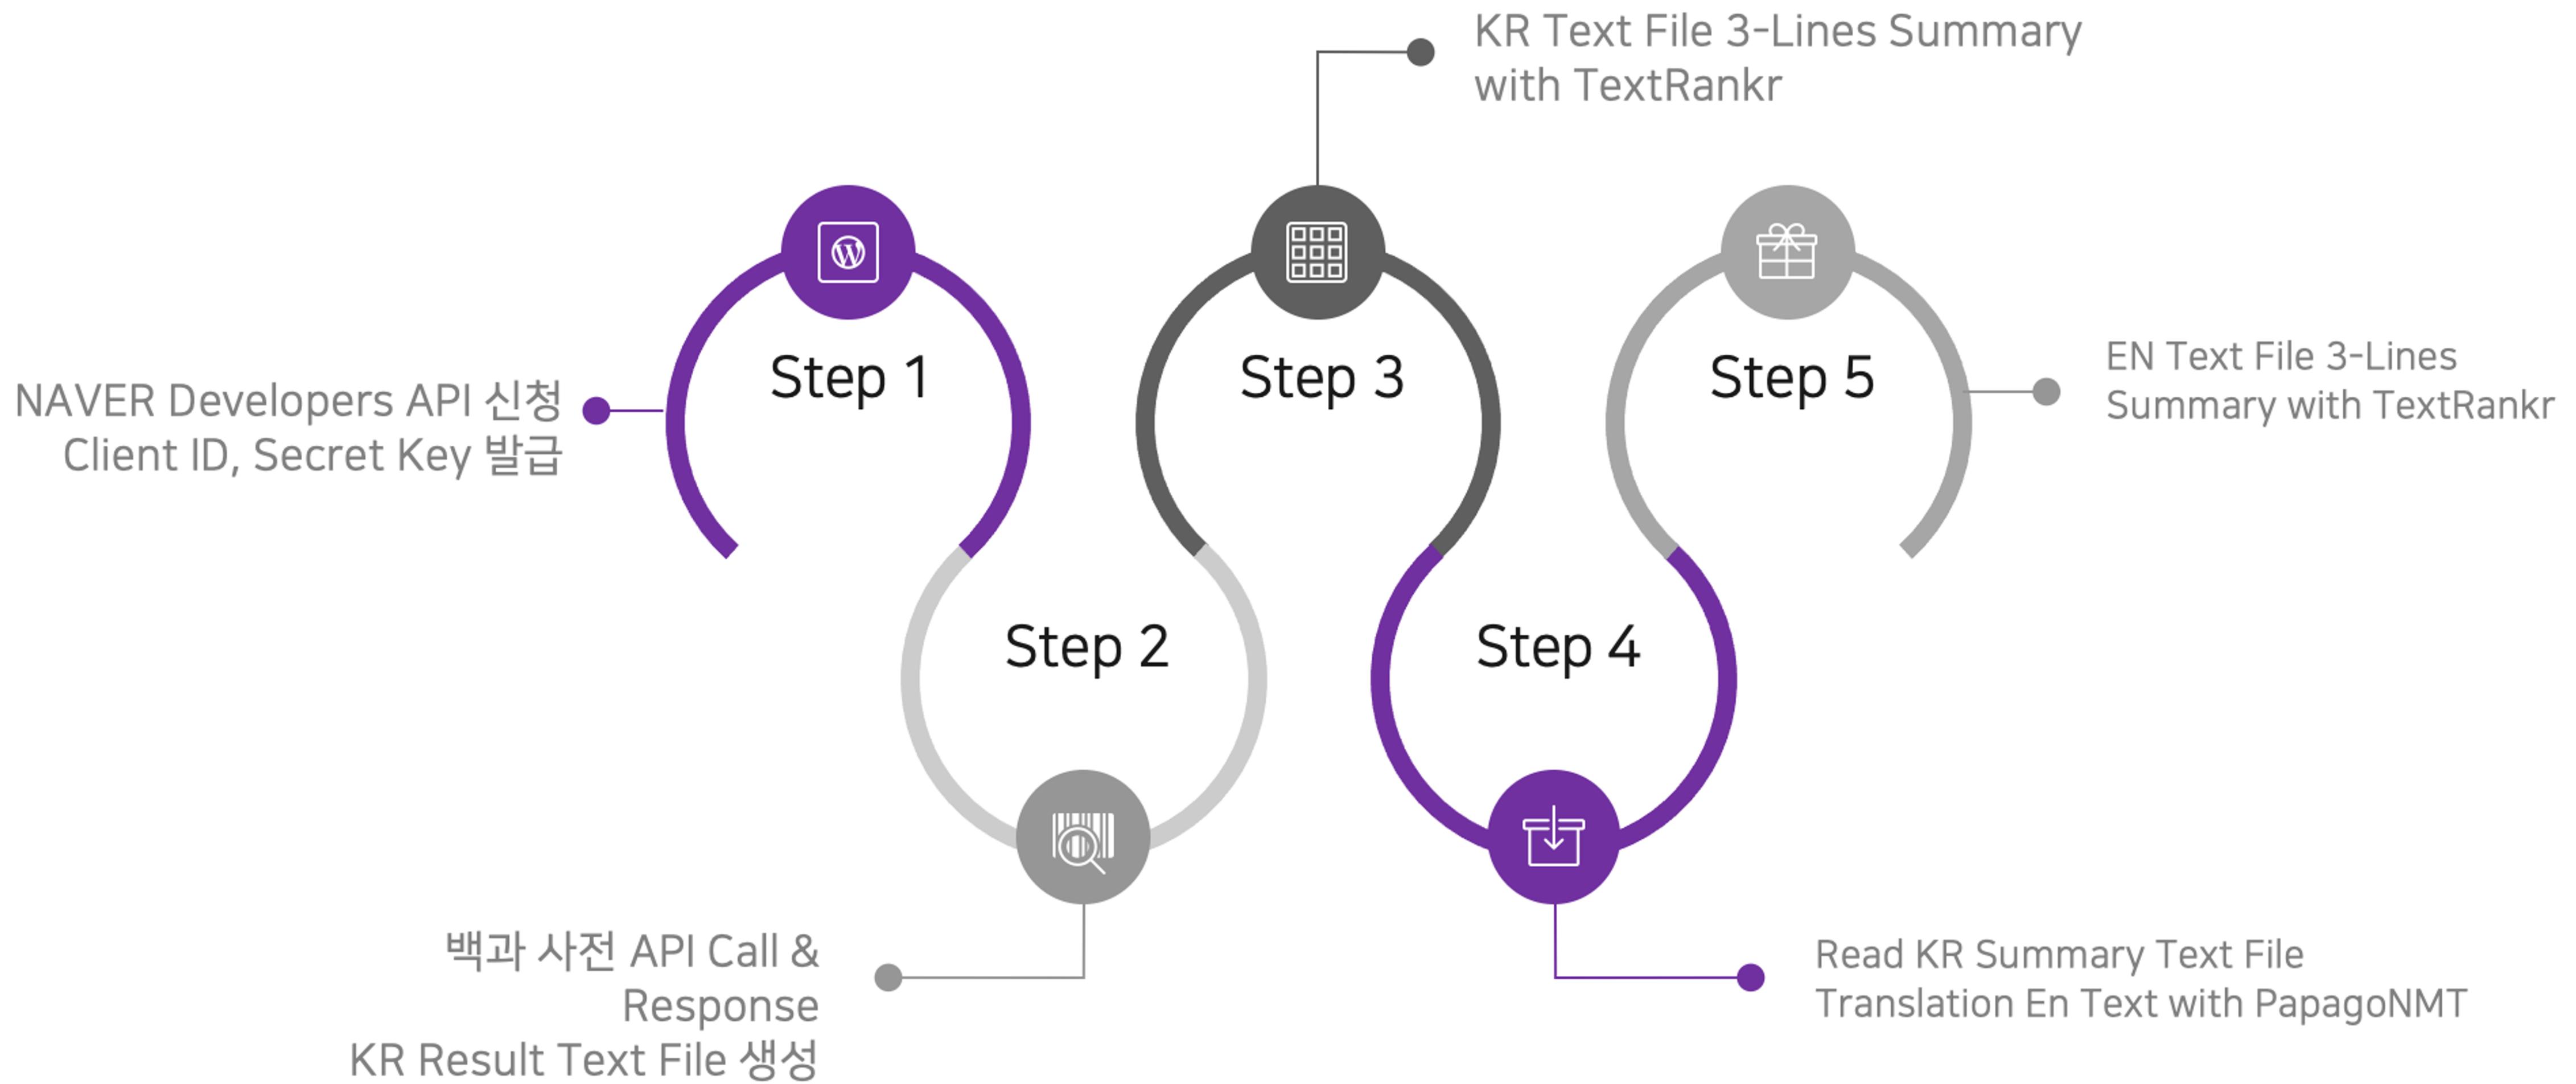

요청 헤더	
헤더명	설명
X-NCPI-APIGW-API-KEY-ID	앱 등록 시 발급받은 Client ID <code>X-NCPI-APIGW-API-KEY-ID:{Client ID}</code>
X-NCPI-APIGW-API-KEY	앱 등록 시 발급 받은 Client Secret <code>X-NCPI-APIGW-API-KEY:{Client Secret}</code>
Content-Type	전송할 콘텐츠 형식 <code>Content-Type:application/x-www-form-urlencoded</code> <code>Content-Type:application/json</code>

요청 바디			
파라미터	타입	필수 여부	설명
source	String	Y	원본 언어(source language)의 언어 코드
target	String	Y	목적 언어(target language)의 언어 코드
text	String	Y	번역할 텍스트. 1회 호출 시 최대 5,000자까지 번역할 수 있습니다.
honorific	Boolean	N	높임말 여부. 영>한 번역에서만 적용됩니다. 기본값은 False

PapagoNMT API Response

응답 바디		
필드명	타입	설명
srcLangType	string	원본 언어 코드
tarLangType	string	번역 결과 언어 코드
translatedText	string	번역된 문장

My Summary Bot Service

98     한국 최초의 중앙 발권은행인 구(舊) 한국은행은 1909년 11월에 설립되었으며, 1911년 일본이 '조선은행법'을 제정·공포함에 따라 같은 해 8월 조선은행으로 개칭되어 8·15광복 때까지 존속하였다. 그후에도 기본적인 성격이나 체제에 별다른 변화 없이 중앙은행으로서의 기능을 계속 수행하였으나 강력한 권한과 정치적 중립성이 보장되는 중앙은행의 설립이 요청됨에 따라 1950년 6월 새로이 한국은행을 설립하였다. 화폐발행과 통화신용정책의 수립 및 집행, 금융시스템의 안정, 은행의 은행, 정부의 은행, 지급결제제도의 운영·관리, 외화자산의 보유·운용, 은행 경영분석 및 검사, 경제조사 및 통계작성 등의 기능을 수행한다.
99     주요 업무는 일반업무와 발권업무, 국고업무, 외국환업무로 나뉜다. 이 중 일반업무로는 일반금융기관에 대한 예금 및 대출 업무와 공개시장 조작, 통화안정계정의 운용이 있고, 발권업무로는 한국 유일의 법화 발행기관으로서 은행권과 주화 발행 업무가 있다. 국고업무는 국고금의 수급 및 대정부 신용에 대한 업무이며, 외국환업무는 외국환 관리와 금융거래 업무를 말한다.
100    기구는 한국은행의 정책결정기구로서 통화신용정책 및 한국은행의 운영에 관한 주요 사항을 심의·의결하는 금융통화위원회, 한국은행을 대표하고 그 업무를 통괄하며 금융통화위원회 의장을 겸임하는 총재와 그를 보좌하는 부총재(1명), 한국은행의 업무를 상시 감사하는 감사(1명) 등으로 구성되어 있다. 총재를 포함한 금융통화위원회 위원과 감사는 모두 대통령이 임명한다.
하부조직으로 2015년 2월 기준 본부부서 12국 3원과 감사실, 지방의 광역시·도에 16개 지역본부, 미국·일본·영국·독일·중국에 5개 국외사무소를 두고 있다.

gn offices;
The former Bank of Korea, Korea's first central issuing bank, was established in November 1909, and was renamed the Chosun Bank in August of the same year and remained until the liberation of August 15. It continued to function as a central bank without any changes in its basic character or system, but was newly established in June 1950 when it was requested to establish a central bank with strong authority and political neutrality. The institution implements functions such as issuing currency and implementing monetary and credit policies, stabilizing financial systems, operating and managing banks, government banks, payment systems, holding and operating foreign currency assets, bank management analysis and inspection, economic surveys and statistics. The main tasks are divided into general affairs, issuance, treasury affairs, and foreign exchange affairs. Among them are deposits and loans to general financial institutions, manipulation of the open market, and operation of monetary stabilization accounts, while issuing banknotes and coins as the only legalization issuing agency in Korea. The affairs of the treasury shall be the affairs of the supply and demand of treasury funds and the credit of the government, and the affairs of foreign exchange shall be the affairs of foreign exchange management and financial transactions. The organization consists of the Monetary Policy Committee, which reviews and resolves key matters concerning monetary credit policy and the operation of the Bank of Korea, the president who serves as the chairman of the Monetary Policy Committee, and the Bank of Korea's audit. All members and auditors of the Monetary Policy Committee, including the president, are appointed by the president. As of February 2015, it has three sub-organizations in 12 countries and audit offices, 16 regional headquarters in local metropolitan cities and provinces, and five overseas offices in the United States, Japan, the United Kingdom, Germany, and China."

CFR(Clova Face Recognition) API를
활용한 My Gallery 서비스 구현하기

The screenshot shows the NAVER Cloud Platform API Reference website. The main title is "NAVER 연동 API". Below it is a section titled "개요" (Overview) which states: "NAVER 연동 API는 HTTP 헤더에 Client ID 와 Client Secret 값만 전송하면 바로 호출하여 사용할 수 있는 Open API로서, Maps, CLOVA, Papago와 같은 상품이 해당됩니다. NAVER 연동 API는 지도, 좌표변환, 단축 URL을 비롯 음성인식, 기계번역, 음성합성과 같은 오픈 API 들이 제공되고 있습니다." (NAVER 연동 API is an Open API that can be called directly by sending only Client ID and Client Secret in the HTTP header. It includes products like Maps, CLOVA, and Papago. NAVER 연동 API provides services such as map conversion, short URL, voice recognition, machine translation, and voice synthesis.)

On the right side, there is a sidebar with various API categories: Content (e.g., NA Speech Recognition(CSR), NA Speech Synthesis(CSS)), Application (e.g., NA Text-To-Speech, NA Premium Voice (CPV), NA Face Recognition(CFR)), and others like NA Voice, NA Detection, NA Estimation, NA NMT, NA Language Detection, NA Korean Name Romanizer, NA Map, NA Tions 5, NA Tions 15, NA Coding, NA Geocoding, NA URL, NA TCHA, NA Trend, NA Chatbot, NA OCR, NA custom api, NA validation, NA location, NA gateway, NA Outbound Mailer, NA Application.

Below the overview, there is a section titled "지원하는 NAVER 연동 API" (Supported NAVER Integration APIs) which lists the following services:

상품명	API
NAVER	NAVER Speech Recognition NAVER Text-to-Speech NAVER Premium Voice NAVER Face Recognition NAVER Voice
Papago	Papago NMT Papago Language Detection Papago Korean Name Romanizer
Maps	Static Map Directions Geocoding Reverse Geocoding

필드명	필수 여부	타입	제약 사항	설명
image	Yes	Binary	최대 2MB 이미지 데이터 지원	분석할 이미지

응답

응답 바디

얼굴 감지 API는 분석한 결과를 JSON 형식의 데이터로 반환합니다. JSON 응답의 각 필드에 대한 설명은 다음과 같습니다.

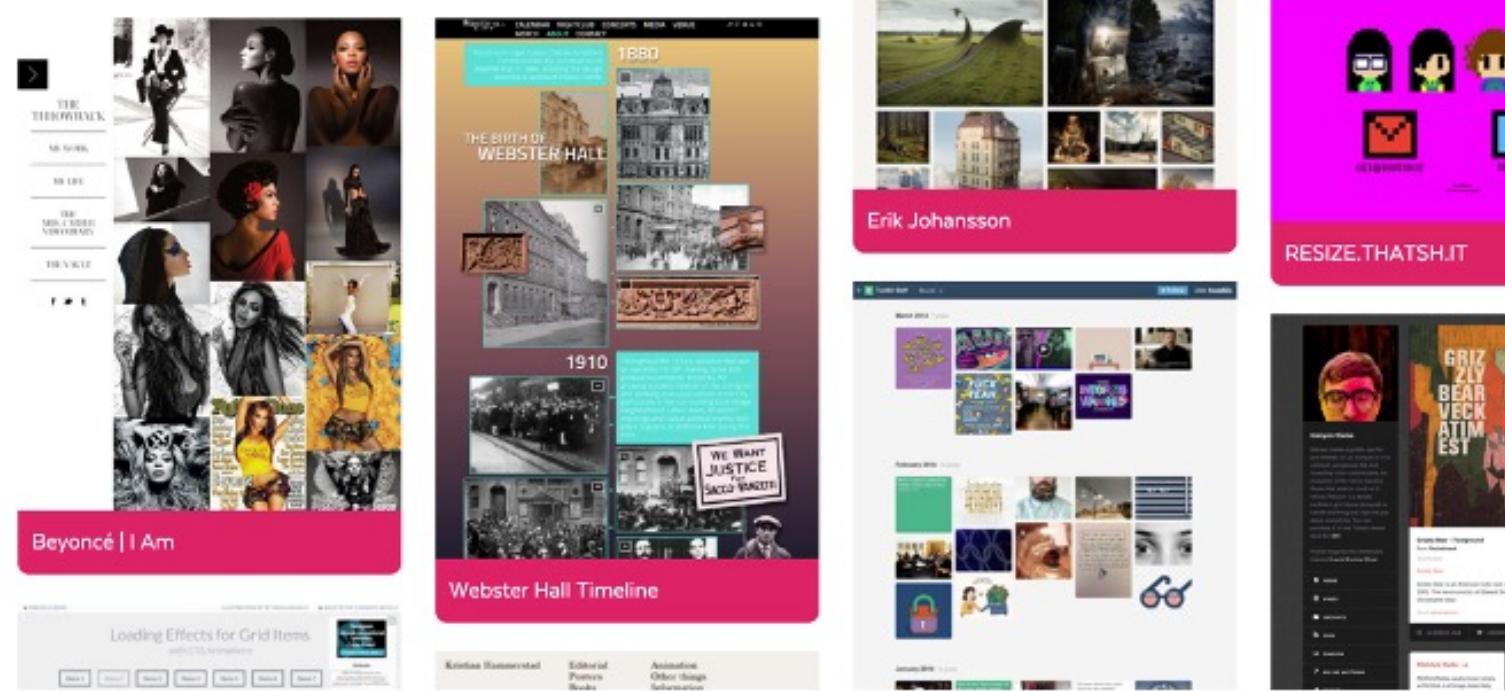

필드 이름	데이터 타입	설명
info	object	입력된 이미지 크기와 인식된 얼굴의 개수 정보를 가지는 객체
info.size	place object	입력된 이미지의 크기 정보를 가지는 객체
info.faceCount	number	감지된 얼굴의 수
faces[]	object array	감지된 얼굴의 개별 분석 결과를 가지는 객체 배열
faces[].roi	place object	감지된 특정 얼굴의 좌표 및 크기 정보를 가지는 객체
faces[].landmark	object	감지된 얼굴의 눈, 코, 입의 위치를 가지는 객체
faces[].landmark.leftEye	place object	왼쪽 눈의 위치
faces[].landmark.rightEye	place object	오른쪽 눈의 위치

Masonry

Cascading grid layout library

What is Masonry?

Masonry is a JavaScript grid layout library. It works by placing elements in optimal position based on available vertical space, sort of like a mason fitting stones in a wall. You've probably seen it in use all over the Internet.

출처 : <https://masonry.desandro.com>

A screenshot of the Masonry GitHub repository. It shows the repository details, a list of commits, and the README file. The README contains a brief description of Masonry as a cascading grid layout library and links to complete docs and demos.

README.md

Masonry

Cascading grid layout library

Masonry works by placing elements in optimal position based on available vertical space, sort of like a mason fitting stones in a wall. You've probably seen it in use all over the Internet.

See masonry.desandro.com for complete docs and demos.

A screenshot of the Masonry documentation page. It includes a script tag for the minified version of the library, a note about working on a container grid element, and a code example for creating a grid with different item widths. It also features sections for CSS, used by, contributors, and languages.

Code

```
<script src="/path/to/masonry.pkgd.min.js"></script>
```

Masonry works on a container grid element with a group of child items.

```
<div class="grid">
  <div class="grid-item">...</div>
  <div class="grid-item grid-item--width2">...</div>
  <div class="grid-item">...</div>
</div>
```

CSS

All sizing of items is handled by your CSS.

```
.grid-item { width: 200px; }
.grid-item--width2 { width: 400px; }
```

WolframAlpha with Computational Intelligence

- 과학/공학용 프로그램 **Mathematica** 개발자 **Stephen Wolfram**이 개발한 검색엔진
- **슈퍼컴퓨터**를 통한 인공지능을 통해 웹 상의 지식을 재구성하여 사용자에게 제공
- 수학적 연산을 직접 수행하고, **Simulating** 그래픽 결과를 제공
- **Mathematica 700만 Lines Code** 프로그래밍 & 약 1만 개의 **CPU** 사용 및 구동

Wolfram Search Engine & API

Wolfram|Alpha is a unique engine for computing answers and providing knowledge

 LINGUISTIC ANALYSIS
New kinds of algorithms
for 1,000+ domains

 CURATED DATA
10+ trillion pieces of data
from primary sources with
continuous updating

 DYNAMIC COMPUTATION
50,000+ types of algorithms
and equations

 COMPUTED PRESENTATION
5,000+ types of visual and
tabular output

Alternative representations:

$$\text{sgn}(x) = \frac{x}{|x|} \text{ for } x \neq 0$$

$$\text{sgn}(x) = e^{i \arg(x)} \text{ for } x \neq 0$$

$$\text{sgn}(x) = \frac{x}{\sqrt{x^* x}} \text{ for } x \neq 0$$

|z| is the absolute value of z
 $\arg(z)$ is the complex argument
i is the imaginary unit
 z^* is the complex conjugate of z

Series representations:

$$\text{sgn}(x) = \frac{2 \sum_{k=1}^{\infty} \frac{(1+(-1)^{1+k}) \sin(kx)}{k}}{\pi} \text{ for } (x \in \mathbb{R} \text{ and } -\pi < x < \pi \text{ and } x \neq 0)$$

$$\text{sgn}(x) = -\frac{4 \sum_{k=1}^{\infty} \frac{(-1)^k T_{-1+2k}(x)}{-1+2k}}{\pi} \text{ for } (x \in \mathbb{R} \text{ and } -1 < x < 1)$$

$$\text{sgn}(x) = \frac{\sum_{k=0}^{\infty} \frac{(-\frac{1}{4})^k H_{1+2k}(x)}{(1+2k) k!}}{\sqrt{\pi}} \text{ for } (x \in \mathbb{R} \text{ and } -1 < x < 1)$$

R is the set of real numbers
 $T_n(x)$ is the Chebyshev polynomial of the first kind
n! is the factorial function
 $H_n(x)$ is the *n*th Hermite polynomial in *x*

Integral representation:

$$\text{sgn}(x) = -\frac{i}{\pi} \int_{-i\infty+\gamma}^{i\infty+\gamma} \frac{(1+x)^{-s} \Gamma(-s)}{\Gamma(1-s)} ds \text{ for } (0 < \gamma \text{ and } x > -2)$$

$\Gamma(x)$ is the gamma function

2 Required NPM Package

3 Wolfram & libxmljs
NPM Package

Implementation (2/6)

- NPM Module 선언
- Test Wolfram API

```
1 // import 'express' module
2 var express = require('express');
3
4 var app = express();
5
6 /* API Authorization start [ --- */
7 //var client_id = '{YOUR_CLIENT_ID}';
8 var client_id = '7f0...w';
9
10 //var client_secret = '{YOUR_SECRET_KEY}';
11 var client_secret = 'yyGS...tIgzam9am11UUK';
12 /* API Authorization end --- ] */
13
14 // Test Korean Query
15 var query = "현재 금 시세는 얼마인가요?";
16
17 /* WolframAlpha Simple Test start [ --- */
18 app.get('/simpleWolf', function (req, res) {
19
20     var resultStr;
21     // WolframAlpha Call API
22     var wolfram = require('wolfram').createClient("RUK6JE-56KU9Q7EX4");
23     //var wolfram = require('wolfram-alpha').createClient("APIKEY-HERE", opts);
24
25     // Test Translated English Query
26     wolfram.query("What is the current price of gold", function(err, result) {
27         if(err) throw err
28         console.error("result", result);
29         resultStr = result;
30
31         //res.writeHead(200, {'Content-Type': 'text/json; charset=utf-8'});
32         res.write(JSON.stringify(resultStr));
33         res.end();
34     });
35 });
36 /* WolframAlpha Simple Test end --- ] */
```

1 Required NPM Package

2 Simple Wolfram API Test Routing

3 Request of Wolfram API Query & Parameters

Implementation (3/6)

- Papago NMT API 호출 & 결과

```
38 /* Papago NMT Translate Simple Test start [ --- */
39 app.get('/papagoNMTTrans', function (req, res) {
40   var api_url = 'https://naveropenapi.apigw.ntruss.com/nmt/v1/translation';
41   var request = require('request');
42   // Setting Options
43   var options = {
44     url: api_url,
45     form: {
46       'source': 'ko',
47       'target': 'en',
48       'text': query
49     },
50     headers: {
51       'X-NCP-APIGW-API-KEY-ID': client_id,
52       'X-NCP-APIGW-API-KEY': client_secret,
53       'Content-Type': 'application/json'
54     }
55   };
56
57   request.post(options, function (error, response, body) {
58     if (!error && response.statusCode == 200) {
59       res.writeHead(200, {'Content-Type': 'text/json; charset=utf-8'});
60       res.end(body);
61     } else {
62       res.status(response.statusCode).end();
63       console.log('error = ' + response.statusCode);
64     }
65   });
66 });
67 /* Papago NMT Translate Simple Test end --- ] */
```

① Simple PapagoNMT API
Test Routing

② PapagoNMT API Headers

③ Request/Response of
PapagoNMT Translation

Implementation (4/6)

- Execute PapagoNMT
 - Execute Wolfram

```
69 | /* WolframAlpha Service start [ --- */
70 | app.get('/getMyKnowledgeInfo/:query', function (req, res) {
71 |
72 |   res.writeHead(200, { 'Content-Type': 'text/html' });
73 |
74 |   // papagoNMT Setting variables
75 |   var papagoNMTStr;
76 |   var papagoNMTJSON;
77 |
78 |   // papagoNMT node.js file load
79 |   var papagoQuery = require('./papagoNMTTrans.js');
80 |   // papagoNMT Translation + wolframAlpha API Call
81 |   var mypapagoQuery = papagoQuery.papagoNMTTranslation(req.params.query, function (response) {
82 |
83 |     papagoNMTStr = JSON.stringify(response);
84 |     papagoNMTJSON = JSON.parse(papagoNMTStr).message.result.translatedText;
85 |
86 |     console.log('::: Original Text : ' + req.params.query);
87 |     console.log('::: Traslated Text : ' + papagoNMTJSON);
88 |
89 |     // wolframAlpha Setting variables
90 |     var wolframStr;

138.3 gfm (gram-force meters)
0.1383 kgfm (kilogram-force meters)

Conversions from other units
1 inbf | 0.08333 ftlb
1 J | 0.7376 ftlb
1 Nm | 0.7376 ftlb
1 kgf cm | 0.07233 ftlb
1 gfm | 0.007233 ftlb
1 kgfm | 7.233 ftlb

Physical quantities
energy

Unit systems
UK Imperial | US Customary System (USCS)

Basic unit dimensions
[mass][length]²[time]⁻²

Corresponding quantities for 1 ftlb
Relativistic mass m from $E = mc^2$:
15 fg (femtograms)
1.5 × 10⁻¹⁷ kg (kilograms)

Comparisons for 1 ftlb as work
 $= 0.01 = 1/74 \text{ J}$

Mathmatics

Input interpretation
solve $x^2 + 4x + 6 = 0$

Results
 $x = -2 - i\sqrt{2}$

Roots in the complex plane

Sum of roots
-4

Product of roots

CFR(Clova Face Recognition) API를 활용한
Face Image Analyzer Service 구현하기

Implementation Step Face Image Analyzer Service

CFR API Image Call

CFR API Request Headers
분석 필요한 Image 전송

Face Recognition

각 Image별 얼굴 인식 수행
얼굴 포함/비포함 이미지 분석

Implementation Step Face Image Analyzer Service

Face Position

Face Position Index
Face Information

Analysis Face Images

Face Analytic Information
CFR API with JSON

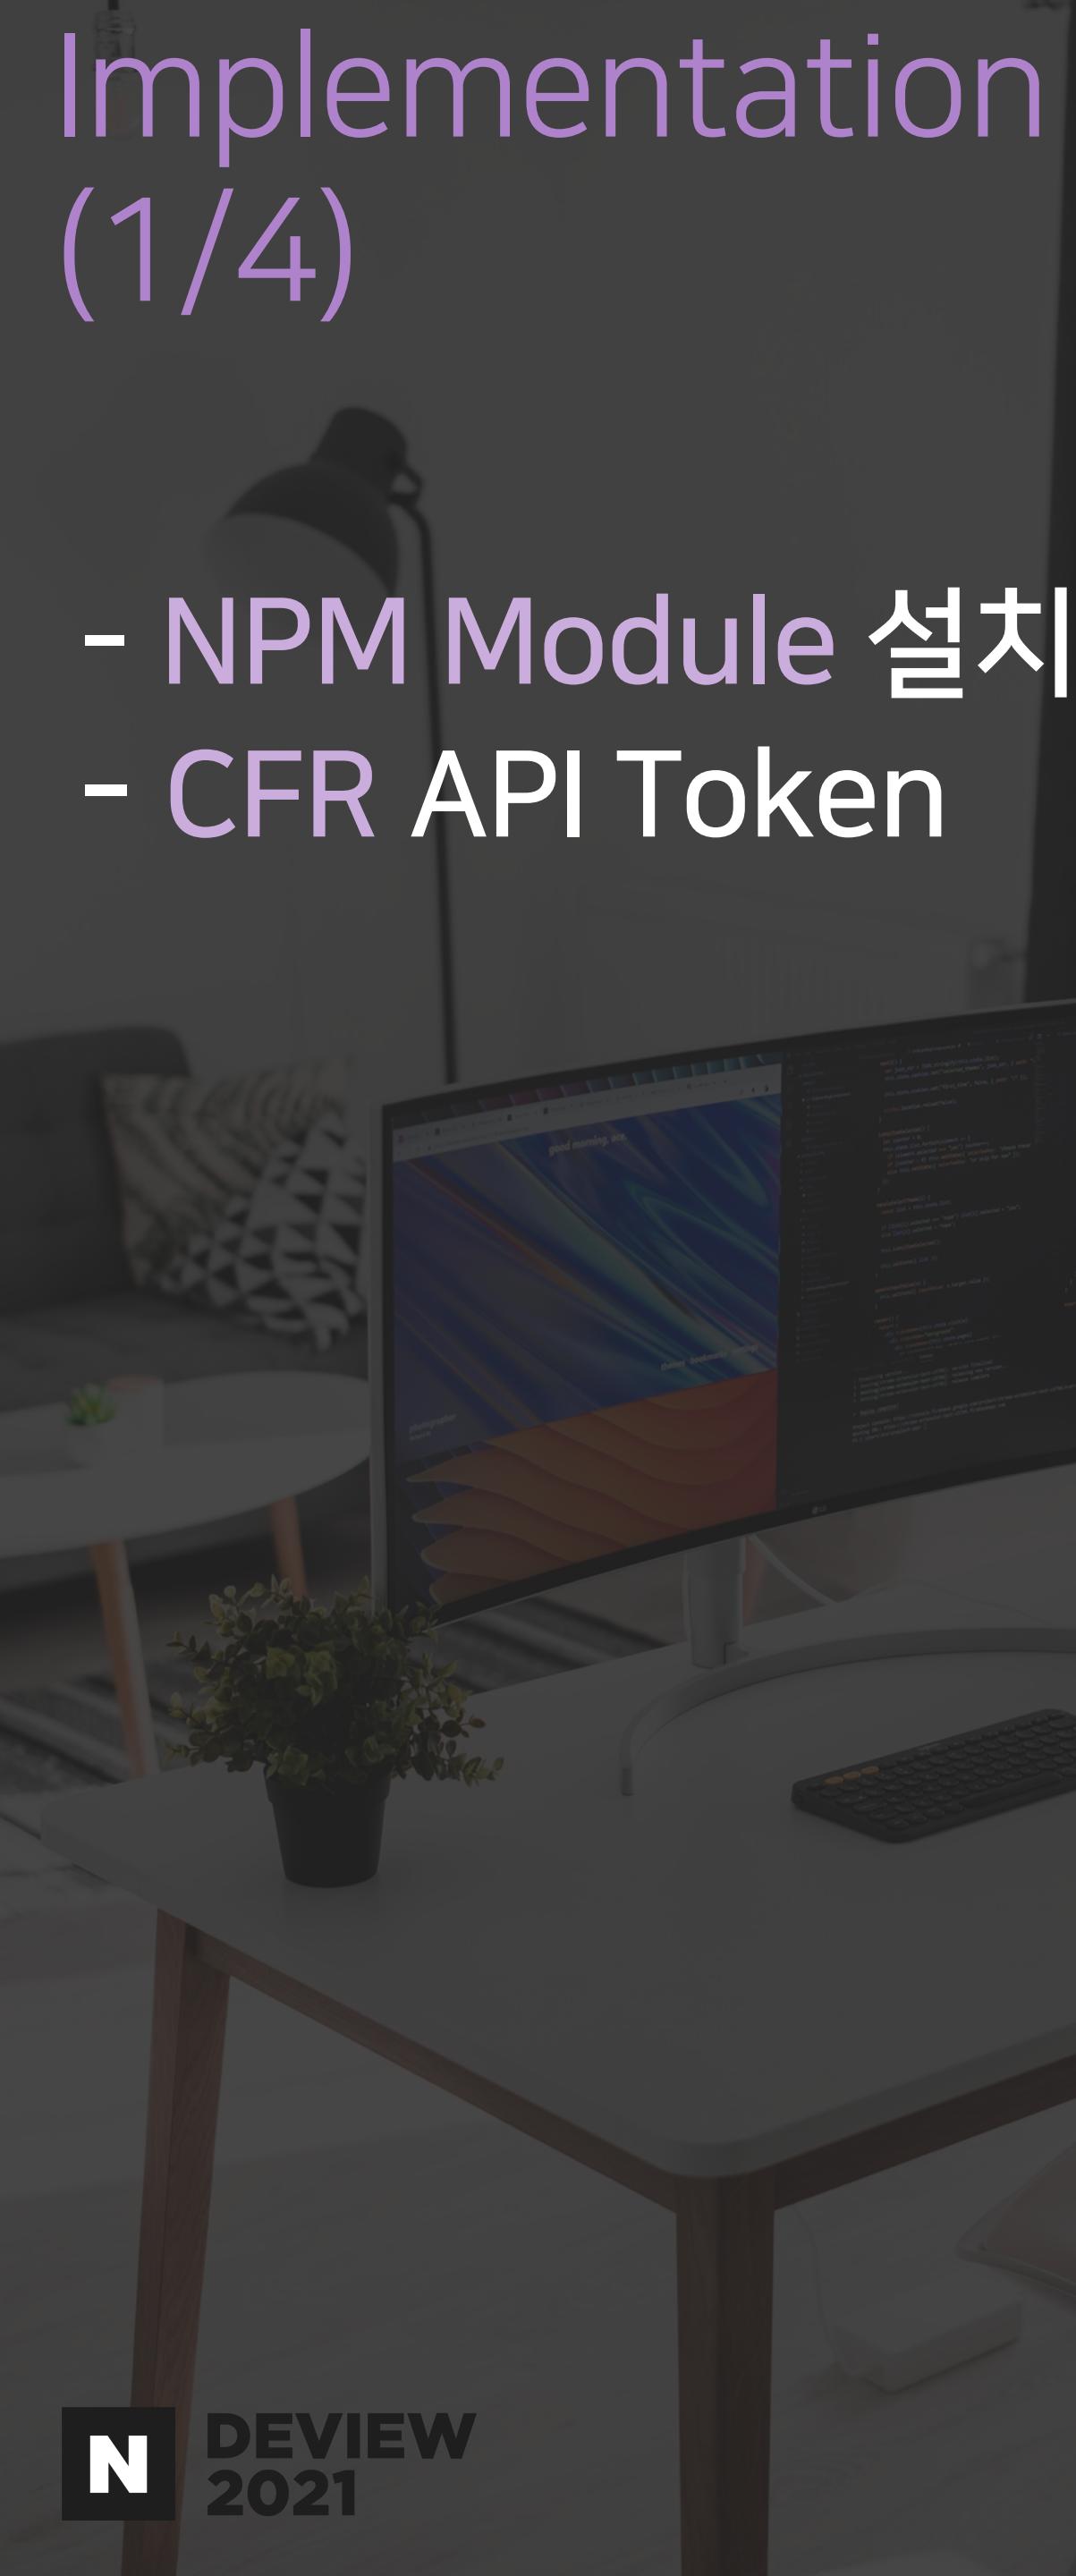

Face Analysis Service

Print JSON to Browser
사진 내 얼굴 이미지 정보 분석

Implementation of Face Image Analyzer Service

Implementation (1/4)

- NPM Module 설치
- CFR API Token

```
1 // import 'express' module
2 var express = require('express');
3 var app = express();
4 |
5 // import 'axios' module
6 const axios = require('axios');
7
8 // API Authorization (Client ID & Secret)
9 // var client_id = '{YOUR_CLIENT_ID}';
10 var client_id = 'P87w1qDhyDGA0Nw4WLF';
11
12 // var client_secret = '{YOUR_SECRET_KEY}';
13 var client_secret = 'UG8';
14
15 var fs = require('fs');
16
17 // Image for Destination Image
18 var arvgStr = process.argv[2];
19
20 // for Browser Print
21 var htmlStr = '<p><b><font color="orange">[ 변환 대상 이미지 ]</font></b></p>' +
22     '/Users/naver/CloudToyService/MyFaceAnalyzer/public/images/' + arvgStr + '<br><br>' +
23     '<p><b><font color="orange">[ 원본 이미지 ]</font></b></p>' +
24     '<br><br>' +
25     '<p><b><font color="blue">[ 사진 기본 정보 ]</font></b></p>';
26
```

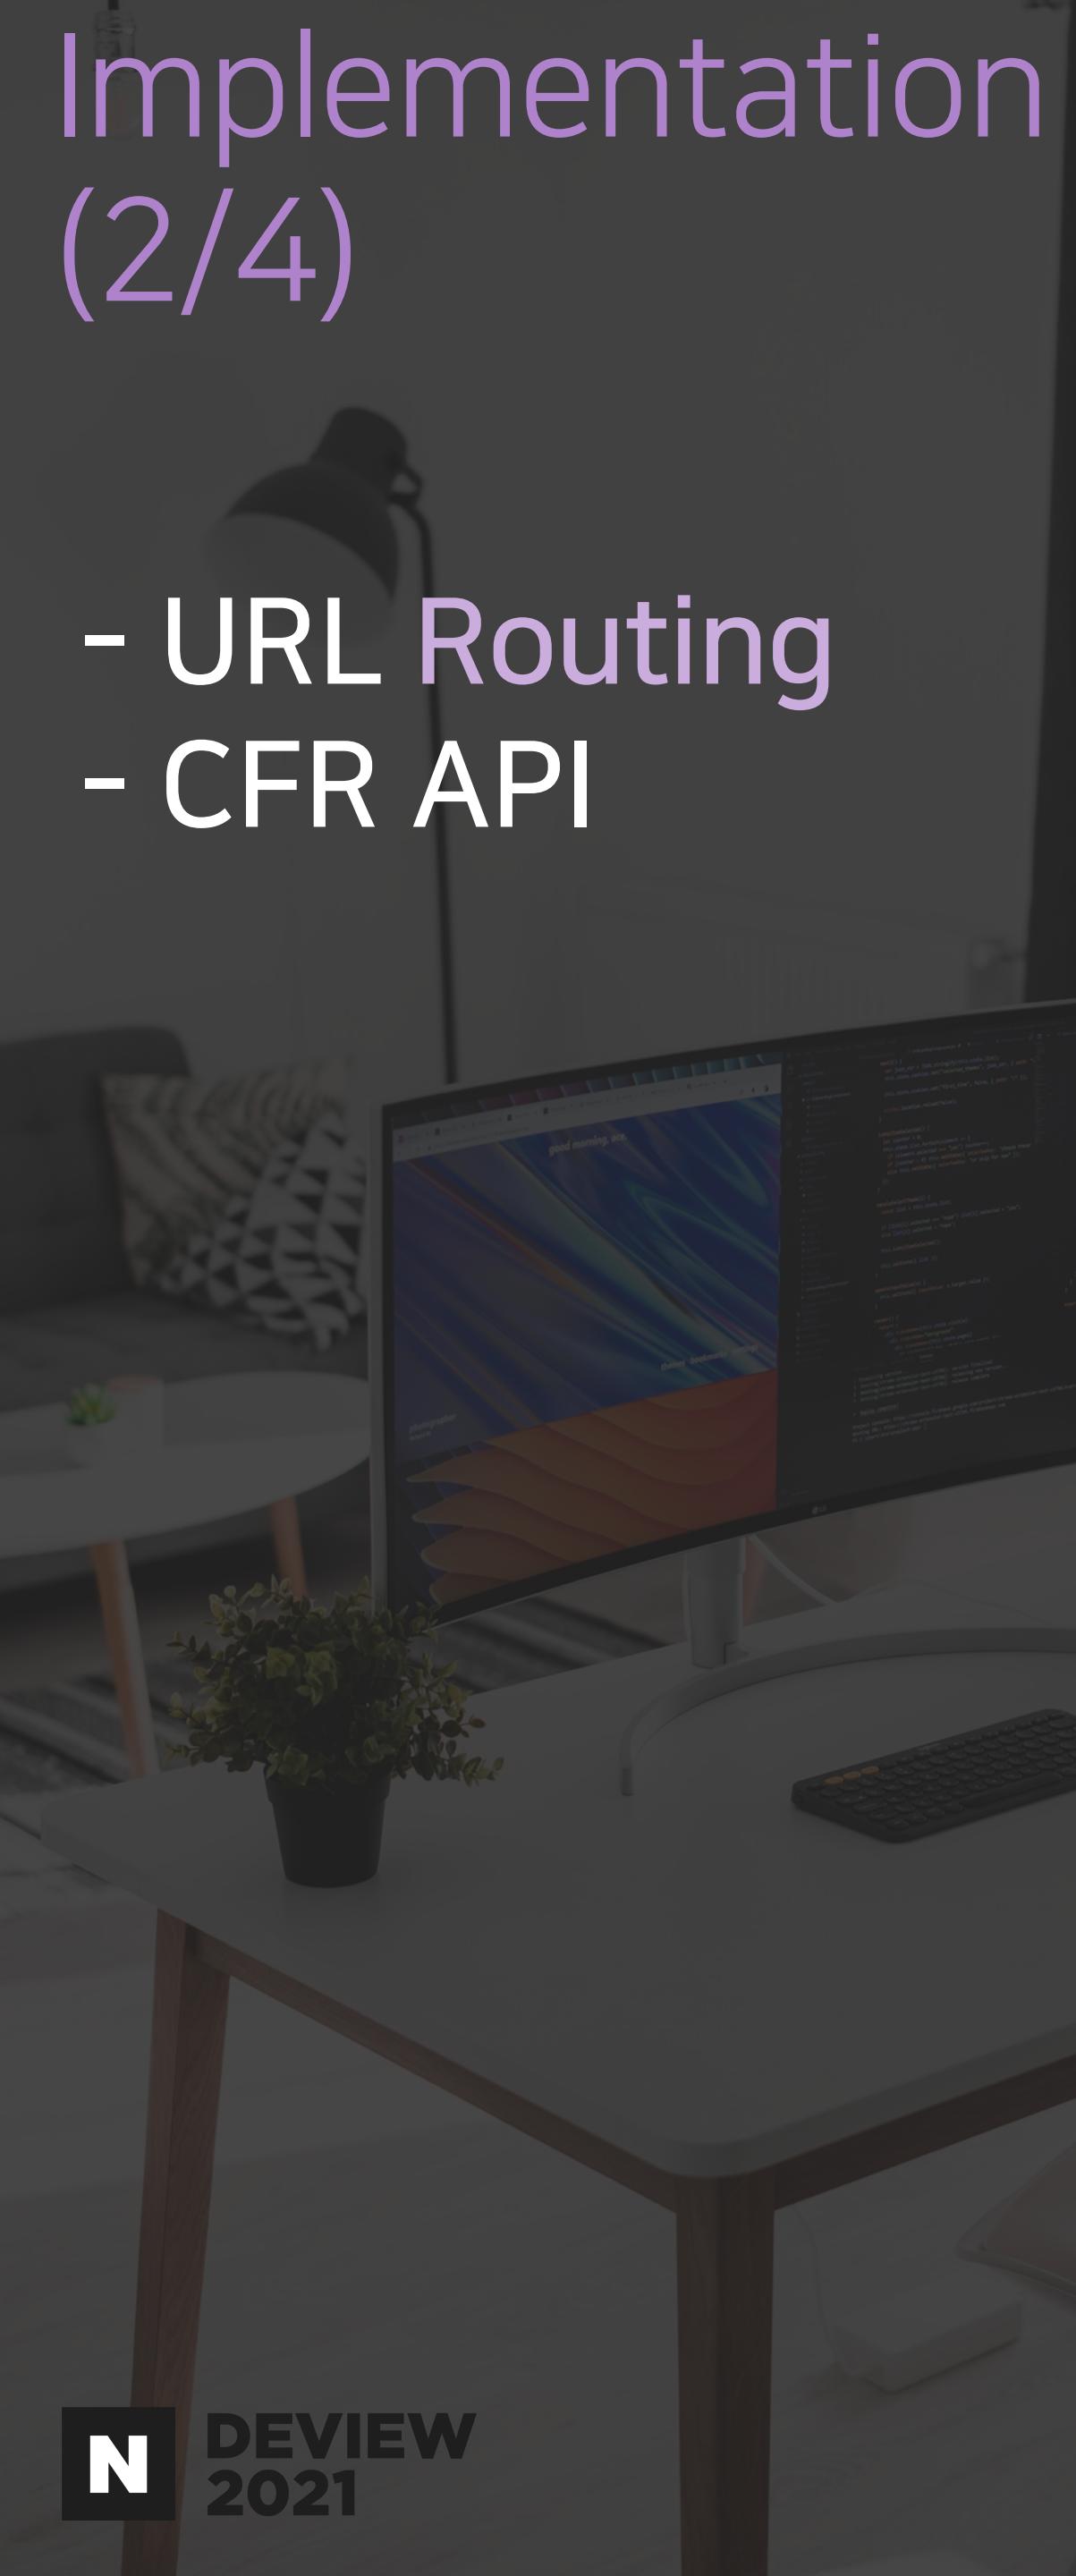

1 Import Required Module

2 CFR API Authorization

3 HTML Query String

Implementation (2/4)

- URL Routing
- CFR API

```
27 app.get('/faceAnalyzer', function (req, res) {  
28   console.log('::: Image Parameter : ' + arvgStr);  
29  
30   var request = require('request');  
31  
32   // Clova Face Recognition API URL(얼굴 감지)  
33   // var api_url = 'https://naveropenapi.apigw.ntruss.com/vision/v1/celebrity'; // 유명인 인식  
34   var api_url = 'https://naveropenapi.apigw.ntruss.com/vision/v1/face'; // 얼굴 감지  
35  
36   // Image formData for NCP CFR API  
37   var _formData = {  
38     image:'image',  
39     image: fs.createReadStream('/Users/naver/CloudToyService/MyFaceAnalyzer/public/images/' + arvgStr)  
40     // FILE 이름  
41   };  
42  
43   // Authorization Information  
44   var config = {  
45     headers: {  
46       'X-NCP-APIGW-API-KEY-ID':client_id,  
47       'X-NCP-APIGW-API-KEY': client_secret,  
48       'Content-Type': 'multipart/form-data'  
49     }  
50   }  
51 }  
52 }
```

1 /faceAnalyzer Routing

2 CFR API Request URL

3 CFR API Request Headers

Implementation (3/4)

- CFR API Request
- Face Image Analysis

```
53 // Photo Infomation Variables
54 var faceCounts = 0;
55 var photoSize = 0;
56
57 request({
58   method: 'post',
59   url: api_url,
60   formData: _formData,
61   headers: {
62     'X-NCP-APIGW-API-KEY-ID': client_id,
63     'X-NCP-APIGW-API-KEY': client_secret,
64     'Content-Type': 'multipart/form-data'
65   },
66   json: true,
67 }, function (error, response, body) {
68
69   res.writeHead(200, { 'Content-Type': 'text/html; charset=UTF-8' });
70
71   // Photo Infomation Objects
72   faceCounts = body.info.faceCount;
73   photoSize = body.info.size;
74
75   // Basic Information for Included Face Image
76   htmlStr += '<b>사진 크기 : '+ body.info.size.width + 'x' + body.info.size.height + '</b><br/>';
77   htmlStr += '<b>얼굴 포함 인원 : '+ faceCounts + '</b><br/><br/>';
78
79   // Detail Information for Image
80   htmlStr += '<p><b><font color="blue">[ 사진 분석 상세 정보 ]</font></b></p>';

  1 CFR API Request Object
  2 Caculate Face Count
  3 HTML Information String
```

Implementation (4/4)

- CFR API Response
- Face Information

```
75 | // Basic Information for Included Face Image
76 | htmlStr += '<b>사진 크기 : '+ body.info.size.width + 'x' + body.info.size.height + '</b><br/>';
77 | htmlStr += '<b>얼굴 포함 인원 : '+ faceCounts + '</b><br/><br/>';
78 |
79 | // Detail Information for Image
80 | htmlStr += '<p><b><font color="blue">[ 사진 분석 상세 정보 ]</font></b></p>';
81 |
82 | for (var i=0; i < faceCounts; i++) {
83 |   //htmlStr += '-----<br>';
84 |   htmlStr += '<b>[ Person #' + i + ' 정보 '+ '</b><br/><br/>';
85 |   htmlStr += '성별 : ' + body.faces[i].gender.value +'<br/>';
86 |   htmlStr += '성별 신뢰도 : ' + body.faces[i].gender.confidence +'<br/><br/>';
87 |   htmlStr += '나이 : ' + body.faces[i].age.value +'<br/>';
88 |   htmlStr += '나이 신뢰도 : ' + body.faces[i].age.confidence +'<br/><br/>';
89 |   htmlStr += '감정 : ' + body.faces[i].emotion.value +'<br/>';
90 |   htmlStr += '감정 신뢰도 : ' + body.faces[i].emotion.confidence +'<br/><br/>';
91 |   htmlStr += '얼굴 방향 : ' + body.faces[i].pose.value +'<br/>';
92 |   htmlStr += '얼굴 방향 신뢰도 : ' + body.faces[i].pose.confidence +'<br/><br/><br/>';
93 | }
94 |
95 | // String to HTML
96 | res.write(htmlStr);
97 | res.end();
98 |
99 | });
L00 |
L01 | });
L02 |
L03 | app.use(express.static('public'));
L04 |
L05 | app.listen(3000, function () {
L06 |   console.log('::: My FaceAnalyzer app listening on port 3000!');
L07 |   app.use(express.static('public'));
L08 | });
L09 | 
```

Face Information Analysis

2

Start Node Server

Execution Result of Face Image Analyzer Service

Execution Result (1/3)

- Face Analyzer 실행 방법

App 실행 방법 및 설명

Application 실행 방법

Node Express 서버를 실행하여, Web 서버를 구동합니다.

```
$ node app.js {Image Path & File Name}
```

Application Overview

아래와 같이 파라미터로 전달된 사진을 분석하여 사용자에게 정보를 제공합니다.

- 사진 이름 : 전달된 사진 Path + FileName
- 사진 기본 정보 : 사진 크기(가로 X 세로), 사진에 포함된 얼굴 수(faceCount)
- 얼굴 상세 정보 (위의 각 사람 별 정보)
 - 성별 (남, 여, 아이 등)
 - 나이 (나이 범위 제공, ex. 34~38)
 - 감정 (화남, 즐거움, 무표정 등)
- 얼굴 상세 정보는 값과 신뢰도("1"에 가까울 수록 일치)를 함께 제공함

Application Execution

아래와 같이 브라우저의 주소창에 입력하면, 해당 Router가 실행됩니다.

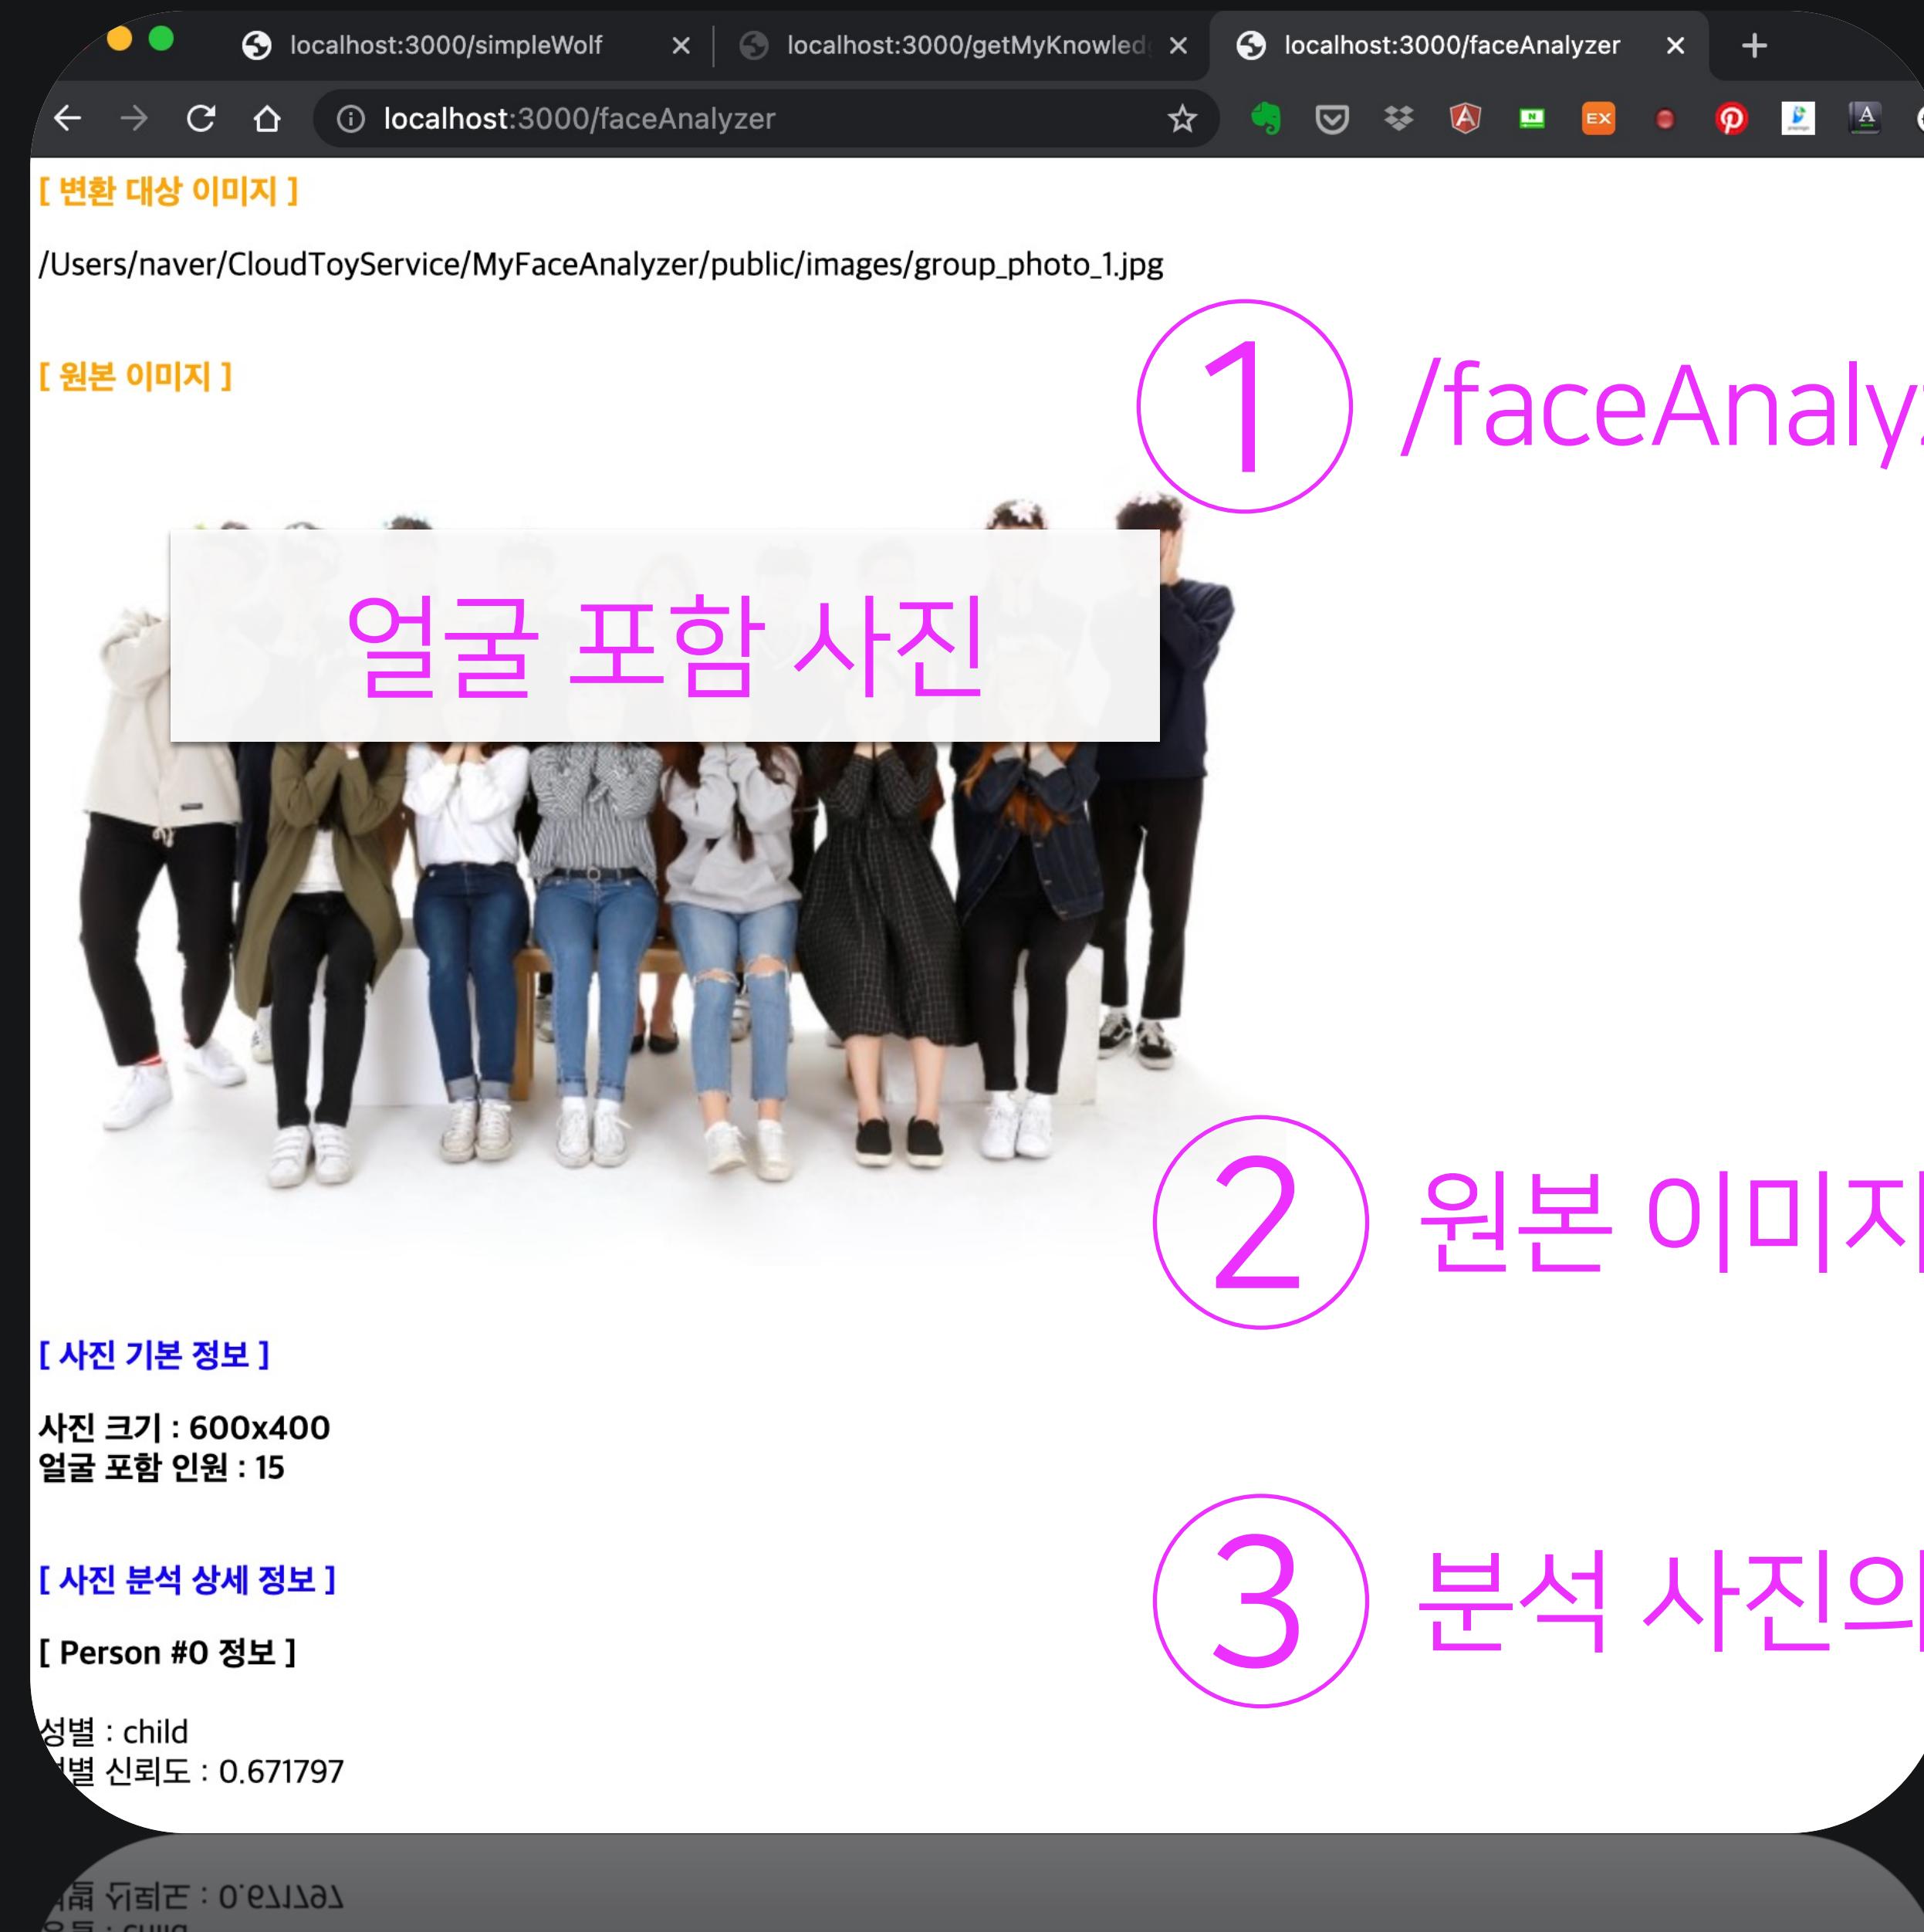

```
$ http://{server_name}:{server_port}/faceAnalyzer
```

Execution Result (2/3)

- Face Analyzer 실행 결과

http://localhost:3000/faceAnalyzer

- ① /faceAnalyzer Route 실행 결과
- ② 원본 이미지
- ③ 분석 사진의 기본 정보

Execution Result (3/3)

- Face Analyzer 실행 결과

상세 분석 정보 : 성별, 감정, 얼굴 방향 분석 정보 제공

[사진 기본 정보]

사진 크기 : 600x400
얼굴 포함 인원 : 15

[사진 분석 상세 정보]

[Person #0 정보]

성별 : child
성별 신뢰도 : 0.671797

나이 : 38~42
나이 신뢰도 : 0.0208397

감정 : smile
감정 신뢰도 : 0.893313

얼굴 방향 : frontal_face
얼굴 방향 신뢰도 : 0.880512

[Person #1 정보]

성별 : female
